

1) FACTORIAL OF A NUMBER USING RAPTOR FLOWCHART

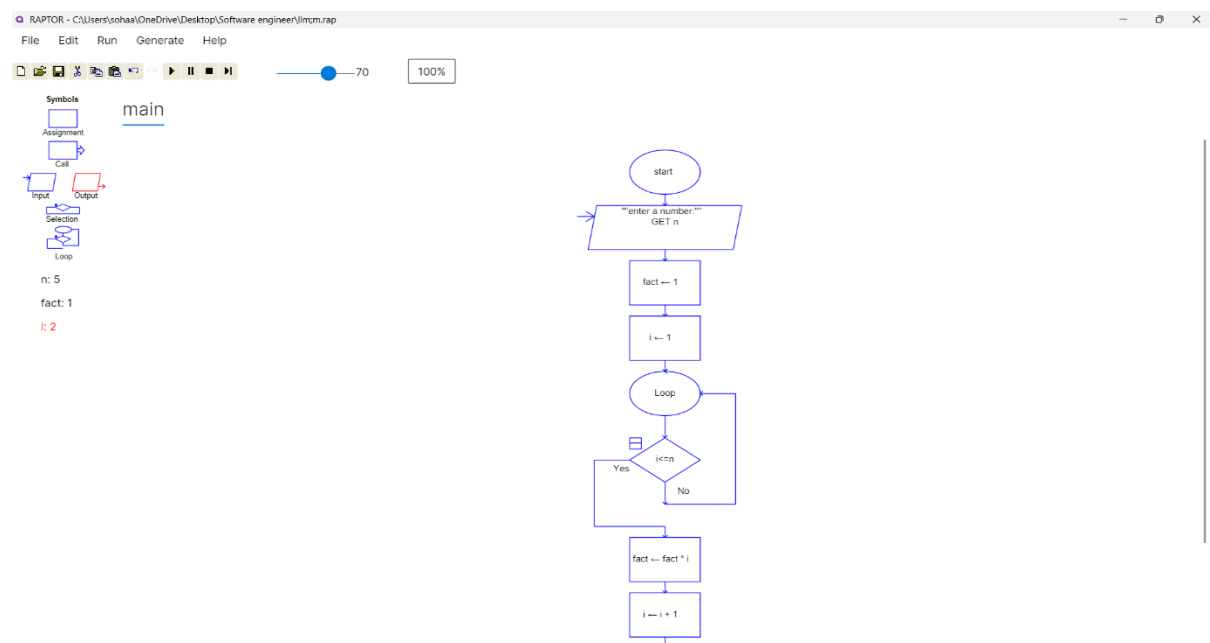

Aim

To develop a RAPTOR flowchart to calculate the factorial of a given number using a loop.

Algorithm

1. Start the program.
2. Input the number n .
3. Initialize $\text{fact} = 1$ and $i = 1$.
4. Repeat while $i \leq n$:
 - Calculate $\text{fact} = \text{fact} \times i$.
 - Increment $i = i + 1$.
5. Display the value of fact .
6. Stop the program.

Screenshot

Input

Enter a number: 5

Output

Factorial = 120

Result

The RAPTOR flowchart was executed successfully, and the factorial of the given number was calculated and displayed correctly.
